

Career in Health and the Victorian Heart Hospital at Monash Clayton Campus

A career in health.

The opportunities are endless. Employment in the healthcare and social assistance industry has increased by 445,600 jobs (or 51.5%) in the last 10 years. Healthcare and social assistance is the largest employing industry in Australia with more than 1.3 million people (or 11.5% of the total workforce). And future employment growth is expected to increase further as our population ages and developments in medical technology expand healthcare options.

In addition to the extra demand for workers, Australia continues to experience a shortage of skilled workers in the health sector, in particular: nurses, midwives, medical diagnostic radiographers and physiotherapists, clinical psychologists and general medical practitioners.

Australian health manufacturing exports increased by over 80 per cent from 2002 to 2011 creating a green shoot of Victorian manufacturing rivalled only by food. It is a booming market.

Training tomorrow's cardiac care workforce at Monash University.

Coronary heart disease is the single leading underlying cause of death across Victoria, Australia. Heart disease is responsible for 29 per cent of years of life lost in Victoria. It is estimated that more than 300,000 adult Victorians are living with heart disease. As Australia's population grows and ages, these rates will increase.

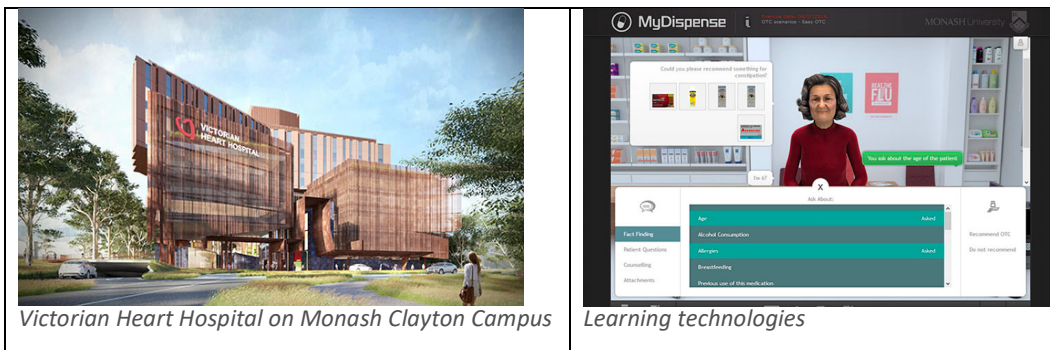

A collaborative partnership between the Victorian Government, Monash Health and Monash University, the Victorian Heart Hospital (VHH) on Monash University Clayton Campus scheduled to open in 2022 will bring world-leading cardiovascular care to all Victorians and Australians, and put specialised life-saving services within close reach of residents of Melbourne's south-east.

The VHH will train new generations of Victoria's cardiac workforce, bringing the latest innovations in patient care to undergraduate and postgraduate students and specialist trainees across the disciplines of medicine nursing, and allied health. The colocation places VHH next door to major national research infrastructure, including the Australian Synchrotron Melbourne Centre for Nanofabrication, and Monash Biomedical Imaging, and places the hospital at the centre of the Clayton Innovation Cluster (Australia's most diverse, adaptive, creative and innovative cluster) - the cluster of innovators located predominantly in and surrounding the Monash Clayton campus.

As Australia's largest, most international and forward thinking university, we are delivering on the Government's economic development priorities with a vision for a thriving Clayton Innovation Cluster that will contribute to innovation and economic development within Victoria.

The combination of the human capital, industry and academic collaborative partnerships and research infrastructure within the Clayton Innovation Cluster is driving innovation and economic growth on a local, national and international scale.

Innovation in the health sector improves the quality of life for Victorians, generates new jobs and investment, and creates new industries and export markets.

Enjoy a life - saving career in health and start your journey at Monash Medicine, Nursing and Health Sciences or Monash Pharmacy. We offers the most comprehensive suite of professional health training in Victoria, Australia. We consistently rank in the top 40 universities worldwide for clinical, pre-clinical and health sciences and 2nd place in the world for pharmacy and pharmaceutical sciences.
